

SR20-D2

Digital Class A pyranometer with Modbus RTU and 4-20 mA output

SR20-D2 is a solar radiation sensor of the highest category in the ISO 9060 classification system: spectrally flat Class A. SR20-D2 is designed for the solar PV industry, offering two types of commonly used irradiance outputs: digital via Modbus RTU over RS-485 and analogue 4-20 mA (current loop). Pyranometer users prefer Hukseflux pyranometers for their unsurpassed measurement accuracy and their lowest total cost of ownership.

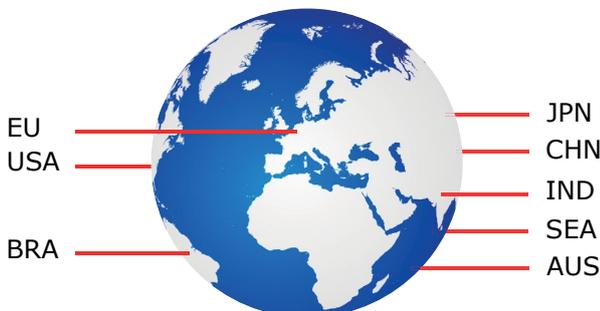

Figure 2 To reduce total cost of ownership: make use of the worldwide Hukseflux calibration organisation.

Introduction

SR20-D2 measures the solar radiation received by a plane surface, in W/m^2 , from a 180° field of view angle. It is employed where the highest measurement accuracy is required. SR20-D2 offers two types of outputs commonly used in the solar PV industry: digital via Modbus RTU over RS-485 and analogue 4-20 mA (current loop). These industry standards allow for easy data acquisition, easy read-out and error-free instrument exchange when using SR20-D2.

SR20-D2 benefits

- digital output: easy implementation & servicing
- best-in-class temperature response $< \pm 0.4\%$ (-30 to $+50^\circ C$), best "zero offset a" and best calibration uncertainty
- test certificates for temperature- and directional response included

Lowest total cost of ownership

Customers prefer Hukseflux pyranometers for their unsurpassed measurement accuracy and their lowest total cost of ownership. Total costs are mainly determined by costs of installation, on-site inspections, servicing and calibration:

Pyranometers must be calibrated every 2 years. Such recalibration is considered good practice for any measuring instrument and is required by ISO, IEC and WMO standards covering PV system performance – and meteorological monitoring. Cost of recalibration, however, can be high. Hukseflux' worldwide calibration organisation will help you reduce these costs. Learn more about [Hukseflux pyranometer calibration services](#).

Improved measurement accuracy

In order to improve overall measurement accuracy, Hukseflux effectively targeted three major sources of measurement uncertainty: calibration, "zero offset a" and temperature response.

The initial calibration uncertainty is reduced to less than 1.2 %. The "zero offset a" specification of SR20 is < 5 W/m² unventilated. Ventilated (with **VU01**) it is just 2.5 W/m².

SR20-D2 has a negligible temperature response. The temperature response of every individual instrument is tested and corrected onboard by the instrument electronics, using a second degree polynomial.

Demanding applications

SR20-D2's low temperature response makes it the ideal candidate for use under very cold and very hot conditions.

SR20-D2 design

SR20-D2 pyranometer employs a state-of-the-art thermopile sensor with black coated surface, two domes and an anodised aluminium body. The connector, desiccant holder and sun screen fixation are very robust and designed for long term industrial use. All parts are specified for use across SR20-D2's entire rated operating temperature range. SR20-D2 offers two types of outputs commonly used in the solar PV industry: digital output via Modbus RTU over 2-wire RS-485 and analogue 4-20 mA output (current loop).

Standards

Applicable instrument classification standards are ISO 9060 and WMO-No. 8.

Choosing the right instrument

Pyranometers are subject to classification in three classes according to ISO 9060. From Class C to Class B and from Class B to Class A, the achievable accuracy improves by a factor 2. Measurement accuracy does not only depend on instrument properties, but also on measurement conditions. A very accurate instrument will quickly underperform without a regular schedule of maintenance. Our [pyranometer selection guide](#) assists you in choosing the right instrument. Whatever your application is: Hukseflux offers the highest accuracy in every class at the most attractive price level.

Compliant with IEC 61724-1:2021, Class A

SR20-D2 complies, without the need for additional accessories, with IEC requirements for Class A for locations where dew and frost is expected for less than 2 % of annual GHI hours. Whether an installation site requires mitigation is decided by analysis of typical meteorological year data for the site. Dew or frost is considered expected when ambient temperature is within 1.5 °C of dew point.

Hukseflux Sensor Manager software

For communication between a PC and SR20-D2, the latest Hukseflux Sensor Manager software can be downloaded. It allows the user to plot and export data, and change the SR20-D2 Modbus address and its communication settings.

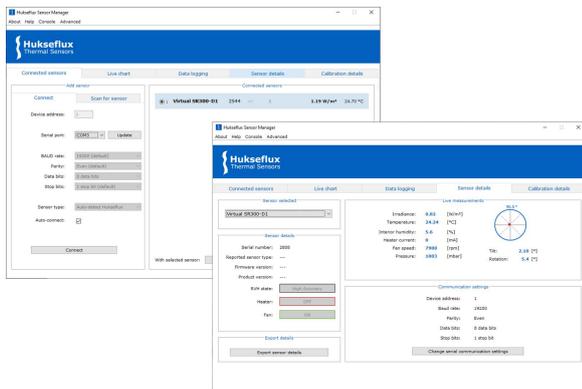

Figure 5 User interface of the Hukseflux Sensor Manager.

Suggested use

- PV system performance monitoring in climates with little dew and frost
- all networks with regular instrument exchange

Levelling mounts

There are several mounting options available for SR20. They allow for simplified mounting, levelling and instrument exchange on a flat surface or a tube.

Optional accessories

- longer cable, in multiples of 5 metres
- adapted transmitted range for 4-20 mA output
- ventilated with VU01 ventilation unit
- PMF series mounting fixtures
- AMF albedo mounting fixture

About Hukseflux

Hukseflux is the leading expert in measurement of energy transfer. We design and manufacture sensors and measuring systems that support the energy transition. We are market leaders in solar radiation- and heat flux measurement. Customers are served through the main office in the Netherlands, and locally owned representative sales offices in the USA, Brazil, India, China, Southeast Asia and Japan.

SR20-D2 specifications

Measurand	hemispherical solar radiation
ISO 9060:2018	spectrally flat Class A pyranometer
ISO 9060:1990	secondary standard pyranometer
WMO performance level IEC 61724-1 compliance	high quality pyranometer meets Class A PV monitoring system requirements for locations where dew and frost is expected for less than 2 % of annual GHI hours. with VU01: meets Class A PV monitoring system requirements for all locations and climatic conditions
Calibration uncertainty	< 1.2 % (k = 2)
Zero offset a	5 W/m ² unventilated 2.5 W/m ² ventilated to WRR
Calibration traceability	285 to 3000 x 10 ⁻⁹ m
Spectral range	-40 to +80 °C
Rated operating temperature range	
Temperature response	< ± 0.4 % (-30 to +50 °C)
Heater	no heating
Temperature response test of individual instrument	report included
Directional response test of individual instrument	report included to 95 °
Standard cable length	5 m
Rated operating voltage range	5 to 30 VDC
Power consumption	< 75 x 10 ⁻³ W at 12 VDC
Digital communication	
Digital output	- irradiance in W/m ² - instrument body temperature in °C
Communication protocol	Modbus
Hardware interface	2-wire (half duplex) RS-485
Transmission mode	RTU
4-20 mA output	
Output	irradiance in W/m ²
Transmitted range of 4-20 mA output	0 to 1600 W/m ²
Rated operating voltage range of 4-20 mA output	5.5 to 40 VDC
Power consumption	
- main supply	< 75 x 10 ⁻³ W at 12 VDC
- 4-20 mA current loop	< 40 x 10 ⁻³ W at 12 VDC, with recommended 100 Ω shunt resistor

SR20-D2 digital Class A pyranometer

This overview summarises the main features and benefits of SR20-D2. Customers prefer Hukseflux pyranometers for their unsurpassed measurement accuracy and their lowest total cost of ownership.

Best measurement accuracy

- spectrally flat
- low zero offsets
- low calibration uncertainty
- best temperature response

Lowest total cost of ownership

- efficient worldwide calibration support
- ISO/IEC 17025 calibration available
- fast servicing organisation

Best connector

- interchangeable cables
- IP67 grade
- for industrial use

Best desiccant cartridge

- visible indicator of instrument health
- rugged aluminium design
- serviceable by user

Best digital interface

- industry standard output types
- Modbus RTU over 2-wire RS-485
- 4-20 mA (current loop)
- registers for re-calibration accessible to users

Best humidity protection

- wrench-operated
- o-ring compressed to spec
- desiccant service interval > 2 years
